

Canadian Bone Mineral Densitometry Facility Accreditation – Approved Sites

The Ontario Association of Radiologists (OAR) and Osteoporosis Canada (OC) have successfully launched the Canadian Bone Mineral Densitometry (CBMD) Facility Accreditation pilot project. By the end of 2010, there will be approximately 60 accredited BMD units in Ontario. This will make the CBMD the largest known BMD facility accreditation body in North America and solidify Ontario's role as the leader in BMD excellence.

The BMD Facility Accreditation pilot project is based on a new national standard developed by the OAR and its multidisciplinary advisory board of the leading Canadian experts from several provinces. The CBMD program is believed to be the only BMD program in the world that incorporates the involvement of a physicist with the ongoing monitoring of quality assurance and quality control to ensure high quality standards and improved levels of patient care, and referring physician confidence.

In addition, the CBMD assists in educating technologists, radiologists and other medical specialists about BMD in the important areas of precision measurement, positioning, reporting, high quality equipment and QC/QA management.

The CBMD pilot project is receiving financial support from Osteoporosis Canada as part of the Ontario government's Osteoporosis Strategy. The core group of hospitals and radiology clinics are located in a geographically representative manner across Ontario and will be selected based on their ability to serve as "Centres of Bone Mineral Densitometry Excellence".

The OAR strongly believes that any accreditation program that ensures better patient care through the highest standards of technical staff qualifications, quality control procedures, examination quality and reporting accuracy should be strongly supported and implemented.

We believe the CBMD Facility Accreditation standards have established a new gold standard in BMD quality assurance for Ontario patients. The key benefits of the gold standard includes:

- Ensuring the highest standard of testing and quality patient management
- Reassuring the public and referring physician that technologists and equipment meet the highest standard possible
- Minimizing the possibility of misdiagnosis due to differences in technology, reporting and facilities
- Ensuring compliance with regulatory bodies

Centres of Bone Mineral Densitometry Excellence

Facilities that are approved by the CBMD receive a three-year accreditation approval that will be subject to renewal. At the time of renewal, facilities will be required to meet any additional changes to the CBMD accreditation process. The following hospital and radiology clinic sites have been approved for CBMD accreditation.

Hospitals

Arnprior and District Memorial Hospital

350 John Street North
Arnprior, Ontario K7S 2P6
Telephone: (613) 623-3166
